

1. List of Applications and Modules Handled by the Department

A. ITI Admissions Application

Application: AP ITI Admissions Portal

Major Modules:

1. Candidate Registration
2. Student/Application Profile
3. Online ITI Application
4. ITI Selection / Choice Filling
5. Merit List Generation
6. Checklist Generation
7. Seat Matrix Management
8. Admission Schedule Management
9. Seat Allotment / Admission Process
10. Certificate Verification
11. Government ITI Admissions
12. Private ITI Admissions
13. Phase-wise Admissions
14. ITI Login
15. DCP Login
16. Department/Admin Login
17. Reports and Dashboards

Important functionality:

- Candidate registration and application submission.
 - Candidate eligibility and merit/rank processing.
 - ITI/trade-wise seat availability.
 - Government and Private ITI admission processing.
 - Phase-wise admission process.
 - Generation of merit lists and checklists.
 - Admission confirmation and student data management.
 - District-wise, ITI-wise and trade-wise reports.
-

B. ITI Placement Application

Application: ITI Placement / Training Management Application

Major Modules:

1. Placement Module
2. In-Plant Module
3. Labs Module

4. Other Than Job Placement
5. Apprenticeship
6. Other Than Apprenticeship
7. Self Employment
8. Higher Education
9. In-Plant Training
10. Industry Master
11. ITI-Industry Mapping
12. Employee Management
13. ITI Infrastructure
14. Placement Reports
15. In-Plant Training Reports
16. Dashboard APIs

Important functionality:

- ITI-wise placement information.
 - Student-wise placement details.
 - Employer/industry information.
 - Job and apprenticeship placement tracking.
 - Self-employment and higher-education tracking.
 - In-plant training student and industry mapping.
 - ITI and industry-wise reports.
 - Dashboard data aggregation.
-

2. Brief About Modules and Dashboards Along With Logic

A. ITI Admissions – Module Logic

Candidate Registration

The candidate registers on the portal and provides required personal, educational and contact information.

Basic flow:

Candidate Registration → Application → Eligibility → Rank/Merit → Choice/Application → Checklist → Merit List → Admission

ITI & Trade Management

ITI master information is maintained with:

- ITI Code
- NCVT Code
- ITI Name
- District
- Government/Private type
- Trades
- Trade duration
- Shifts
- Units
- Admission permission

The system uses ITI and trade master data to determine the available admission choices.

Seat Matrix

Seat availability is maintained at **ITI + Trade + Shift/Unit** level.

The system calculates:

Opened Seats
Filled Seats
Vacant Seats
Admission Percentage

Basic logic:

Vacant Seats = Opened Seats - Filled Seats
Admission % = Filled Seats / Opened Seats × 100

Merit List / Rank

Candidate ranks are generated based on the applicable admission rules and candidate marks/eligibility.

The merit process is used to determine eligible candidates for admission and selection.

Checklist

The checklist contains candidates considered for the respective admission process and is used by the concerned ITIs/DCPs for verification and admission processing.

Phase-wise Admission

The application supports multiple admission phases.

The candidate can utilize the application facility available in each phase according to the admission rules, including applying to multiple ITIs where permitted.

B. Admissions Dashboard Logic

The dashboard aggregates data from the admission transaction tables and master tables.

Important dashboard indicators:

- Total Registered Candidates
- Total Applications
- Total Government ITIs
- Total Private ITIs
- Total Seats
- Filled Seats
- Vacant Seats
- District-wise Admissions
- ITI-wise Admissions
- Trade-wise Admissions
- Phase-wise Admissions
- Government vs Private Admissions

Example

```
District
  ↓
ITI
  ↓
Trade
  ↓
Opened Seats
  ↓
Filled Seats
  ↓
Vacant Seats
  ↓
Admission %
```

B. Placement Application – Module Logic

Placement Module

Placement information is entered by the concerned ITIs.

Placement categories include:

- Job / Campus Placement

- Other Than Job
- Apprenticeship
- Other Than Apprenticeship
- Self Employment
- Higher Education

The system stores student-wise placement information and aggregates it for reports and dashboards.

Placement Dashboard Logic

The dashboard calculates:

Total Placement Records
 Total Students Placed
 Number of ITIs
 Number of Employers/Industries
 Category-wise Placement
 District-wise Placement
 Trade-wise Placement

In-Plant Training Module

The module manages training conducted for ITI students in industries.

Important information:

- ITI
- Trade
- Student
- Industry
- Training period
- Number of students
- Industry mapping

Industry Mapping

An ITI can be mapped to multiple industries and an industry can be mapped to multiple ITIs/trades.

Therefore, the system maintains an **ITI–Industry mapping** transaction.

Dashboard indicators include:

- Total In-Plant Training Records
- Total Students
- Total ITIs
- Total Industries
- ITI–Industry Mappings

- Trade-wise Training
- District-wise Training

3. List of All Databases and Tables from Information Schema

**itiap
placements**

A. itap

admission.iti_addmission
admission.admission_phase
public.student_application
public.application
public.student_trade_sel
public.trade_sel
public.student_cand_marks
public.cand_marks
public.ranks
public.checklist
public.admission_timinings
public.dist_mst
public.iti
public.ititrade_master
public.caste_master

B. placements

labs.labs
labs.labitems
placements.placements
implant.implant

4. List of Usable Tables With Description

	Table	Type	Purpose
iti		Master	ITI master information

Table	Type	Purpose
dist_mst	Master	District master
ititrade	Master/Mapping	ITI-wise trade information
ititrade_master	Master	Trade master information
iti_seatmatrix	Master/Configuration	ITI/trade-wise approved/opened seats
shift_unit_permitted	Master/Configuration	Permitted shifts and units
shift_unit_permitted2025	Master/Configuration	Previous-year shift/unit configuration

A. ITI Admissions – Master Tables

Table	Type	Purpose
public.iti	Master	Stores basic information and status of Government and Private ITIs.
public.dist_mst	Master	District master used to map ITIs and generate district-wise reports.
public.ititrade_master	Master	Master information for trade names/codes.
public.trade_sel	Master	Reference table for trade selections available to students.
public.caste_master	Master	Stores caste code and caste name; it stores all of the castes.
public.admission_timinings	Master	this table stores colleges are verifying the (frommer)it to (tomerrit) and timings of verification, and castegategories
admission.admission_phase	Master	admission_phase stores the phase details for the admission process. For iti private and govt and application registrataion,verification,meritl ist,addmisions,reverification starting dated and ending dates

B. ITI Admissions – Transaction Tables

Table	Type	Purpose
public.student_application	Transaction	student_application table after student registered then the application details stored in the student_application table
public.application	Transaction	it captures the processing and verification of admission applications, and its records are created and updated as applicants
public.student_trade_sel	Transaction	this table records the details of the student applying the iti colleges during the phase1
public.student_cand_marks	Transaction	stud_cand_marks stores all the marks of scc and intermarks of the student
public.cand_marks	Transaction	this table records the whether the student marks details are correctly or not
public.ranks	Transaction	this table records the ranks of the students after the check list generation to finalize the ranks to students
public.checklist	Transaction	this table stores the temporary ranks of the students
admission.iti_admission	Transaction	iti admission table stores the admission details of the students

C. Placement & In-Plant – Master & Transaction Tables

Table	Type	Purpose
placements.industries	Master	Industry/employer master information (Industry type, Location, Contact).

placements.placements	Transaction	Stores student placement information (Job, Apprenticeship, etc.).
implant.implant	Transaction	Stores In-Plant Training information including ITI, Trade, Student, and Industry mapping.
labs.labs	Master	Stores the equipment data used during the in-plant training.
labs.labitems	Transaction	Stores the exact details about each equipment in the labs
